

- Scope of EcoPrompt Generator
- Interpretation and Clarity: Translate natural language user input into structured, unambiguous instructions for the LLM.
  - Efficient Guidance: Provide precise guidance to the LLM, reducing trial-and-error exploration.
  - Bias Mitigation: Help mitigate biases by generating prompts that avoid biased content and behaviors.
  - Content Relevance: Ensure generated images are relevant to the user's or application's needs.
  - Iteration Reduction: Minimize the need for iterative adjustments and refinements in the image generation process.
  - Feedback Loop: Facilitate a feedback loop with users for iterative improvements over time.
